The Computer Interface Torque Tester is designed to communicate with computers running an Operating System that is Windows 10 or later. If you are having issue with communicating with something older than Windows 10 you can try the following.

You notice the lack of an USB COM Port, it is not active when plugging in the USB cable.

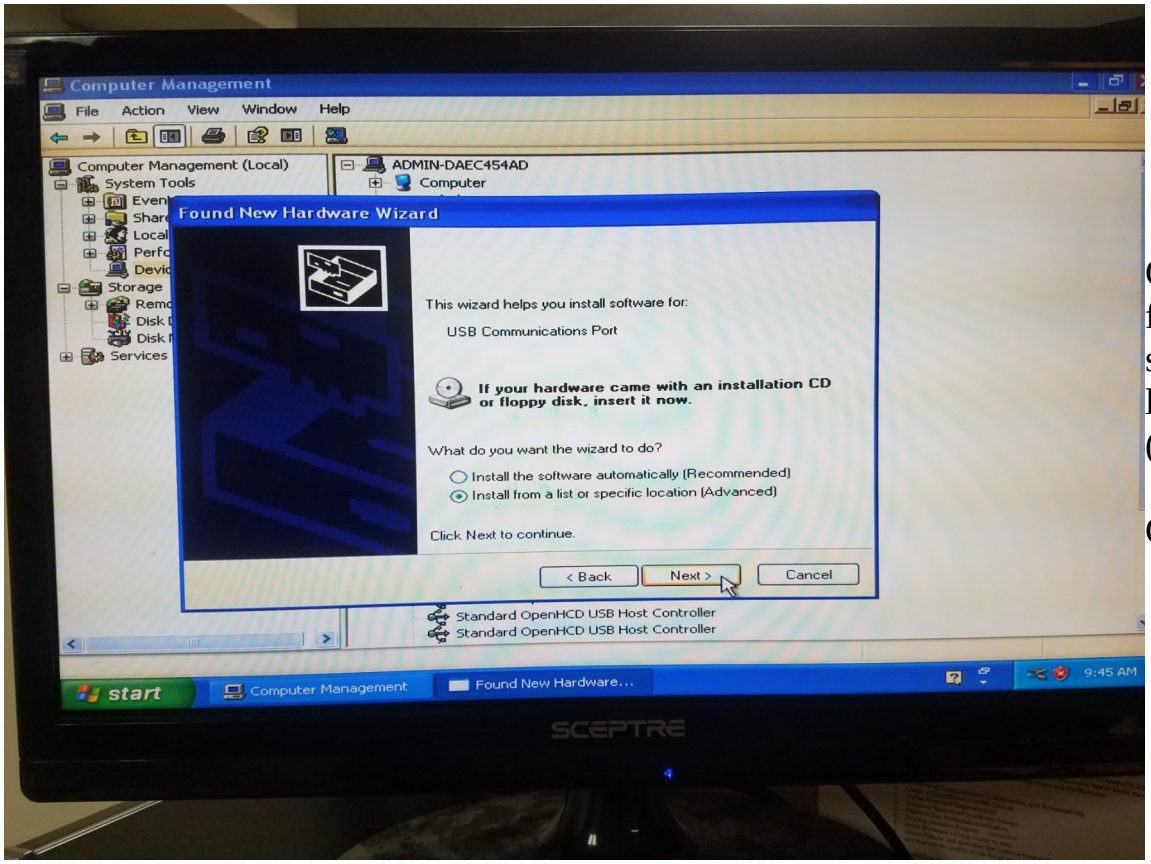

It asks you to install new software for your new hardware.

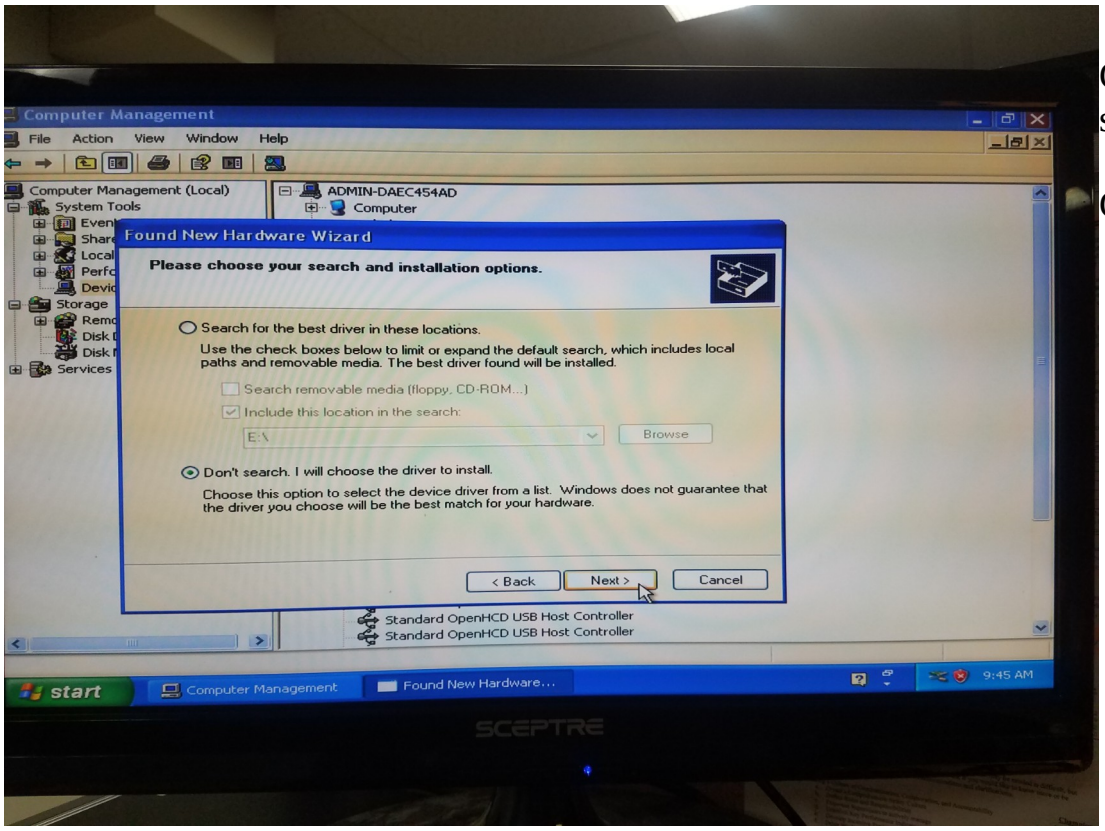

Click No, not this time

Click Next

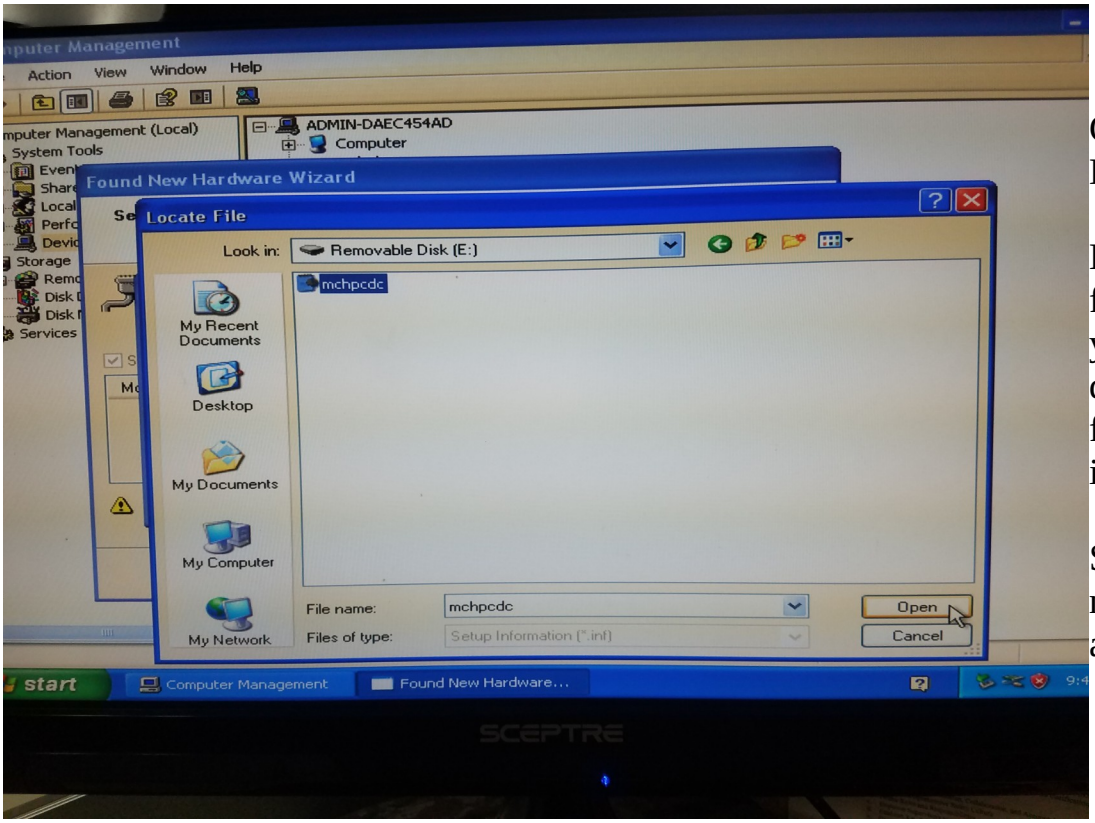

Click Install from a list of specific location (Advanced)

Click Next

Click Don't search….

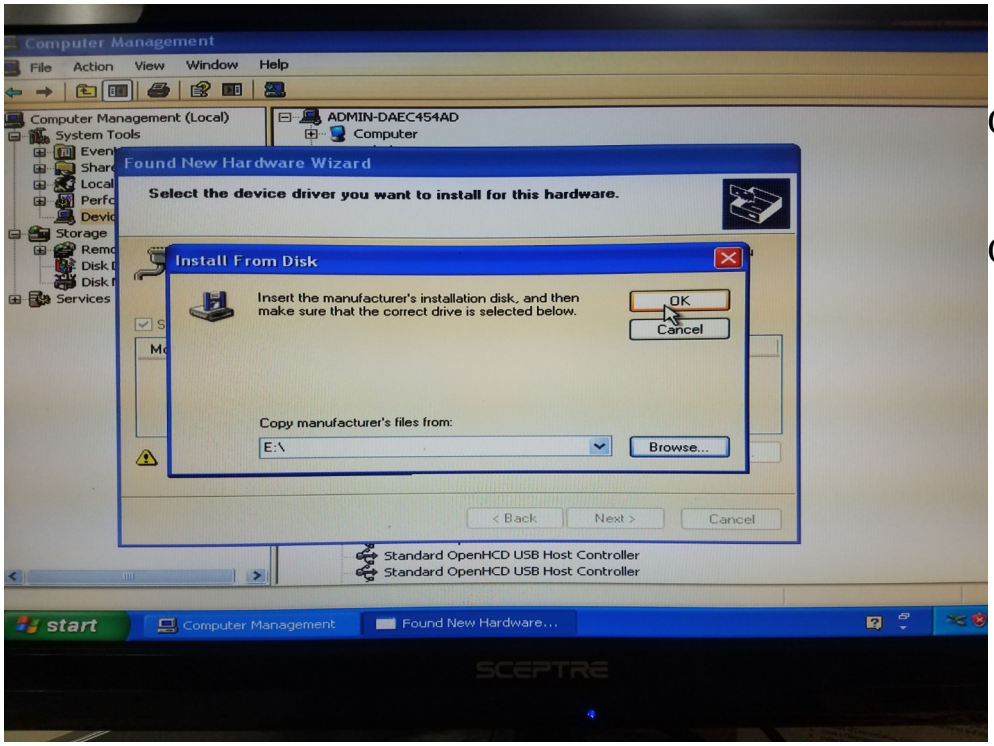

Click Next

Click Have Disk

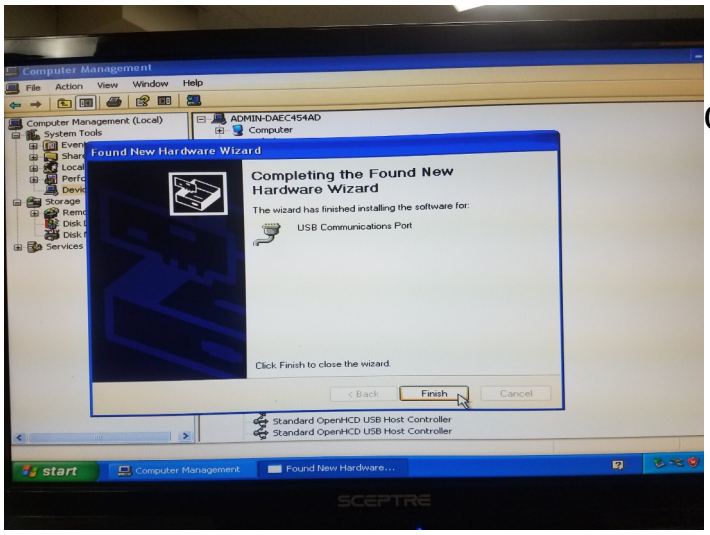

Browse to find the files you downloaded from the internet.

Select mchpcdc.inf and click open

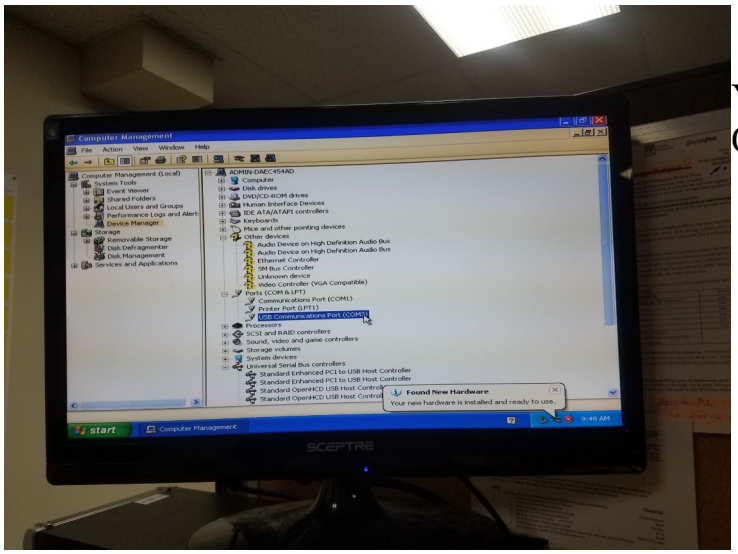

Click OK

Click Next

Click Finish

You will now see USB Communication Port (COM?)
